

PRESENTATION OF THE M2M* CONCEPT FOR TECHNICAL TEXTILES

*M2M (Made to Measure) is a Protan concept based on customised, made-to-measure products and solutions performed with an exceptional level of service.

We have developed this concept to meet all the expectations that our customers have throughout the process from development to delivered product.

THE ART OF MASTERING A MATERIAL

Protan has more than 60 years of experience in technical textiles. PVC coating is the core activity at our production plant in Drammen. We can document extensive know-how in this field, and we also carry on continuous product development. Our value chain in technical textiles includes factory tailoring and fitting for a wide range of finished goods. We are experts in all factory-tailoring and factory-fitting techniques. The processing takes place at four plants - two in Sweden, one in Poland and one in Norway.

This means that we handle and control the whole process from material refinement and processing to finished product.

Full control ensures greater reliability.

WE LISTEN IN ORDER TO LEARN

A valued supplier requires the ability to think like a customer. Most of our assignments are based on the market's requirements for customised, made-to-measure solutions.

Our customers come from many industries and environments, and this brochure contains some varying examples of our capabilities.

Made-to-measure sealing rings for hearing protectors. The material is resistant to chemicals and allergy tested.

SOMEONE TO DISCUSS THINGS WITH, SOMEONE TO TRUST

We know from experience that the best solution is most often the result of good dialogue. As a supplier of the finished product, you are closest to the market and define the market requirements.

We are open to all technical possibilities that materials and factory tailoring can offer. As a customer, you will experience great freedom of design in terms of application solution, colours, size and choice of materials.

Together, we will find a solution of a high-quality standard that meets both environmental and performance requirements. Protan is NS-EN ISO 14001 and NS-EN ISO 9001 certified by Det Norske Veritas.

▲ Large-size industrial gate.
- An elegant solution with flexibility of construction and weight in relation to its size.

Flexible tank for transportation of water or oil.

Flexible waterproof deck superstructure.

PROTAN FACTORY WELDING SERVICES.

Protan has a large capacity and offers flexibility in meeting Customer's expectations for a quick and on-time deliveries of factory welded products "M2M" to Customer specification.

We value integrity and our ability to work closely and efficiently with our Customers.

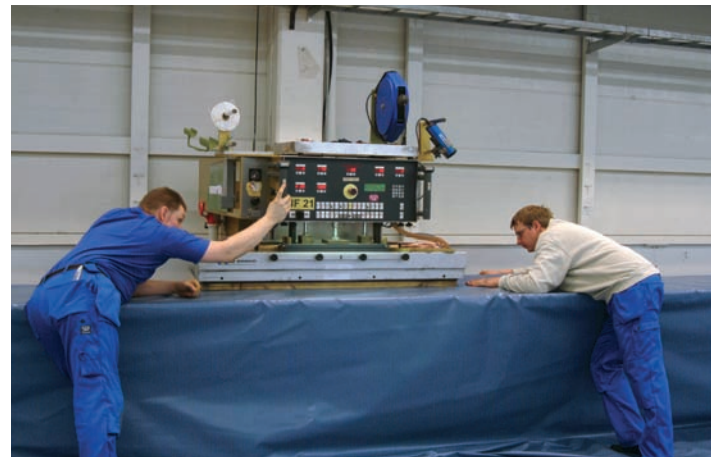

This has been, and will always be Protan's highest priority.

Protan is a NS-EN ISO 9001 certified company, to ensure our production and products meet Customer requirements and that our processes are continually improved.

Through close dialogue between the Customer and our technical resources, we can ensure that the basic parameters established in the design and engineering phase are met by choosing the correct Technical Textile characteristics and method of safely fitting the product for a given application.

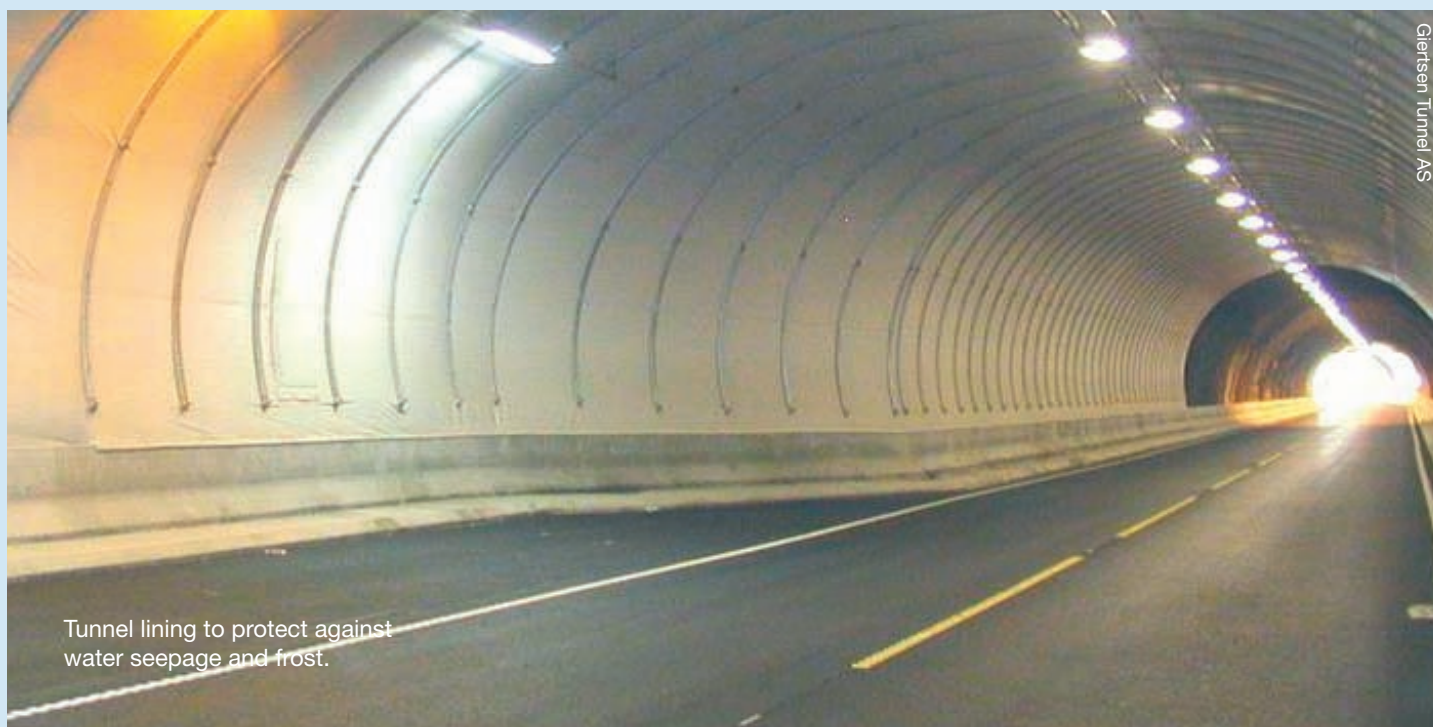

OUR CUSTOMERS ARE OUR PARTNERS.

Together, we develop ways and means of producing high quality products whether they are small and simple or large and complex.

OUR M2M CONCEPT IS FOUNDED ON FOUR CORNERSTONES

- The excellence of the material and the factory-tailoring possibilities.
Only the imagination puts a limit to the product possibilities.
- Correct understanding is essential to the result. The ability to listen is an art.
A precise definition of needs and requirements enables us to provide accurate advice.
- Know-how that can realise goals, rapidly and cost-effectively.
We have wide system knowledge, and we customise made-to-measure basic solutions for new requirements.
- Performance according to expectations, with the largest factory-tailoring and factory-fitting capacity in Europe and documented routines for total quality in production and delivery.

Rubb Building Systems

Made-to-measure solutions for aircraft hangars.

Liners for water and oil reservoirs. We have delivered bottom and top membranes. This reservoir is for 50,000 m³.

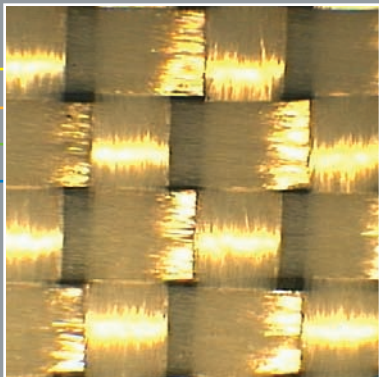

Helicopter hangars which can be transported by air and mounted quickly without any foundation.
